

Commonsense Childbirth

because every woman deserves a healthy baby

'Easy Access' Clinic Expansion

Improving Birth Outcomes "The JJ Way®"

A Women's Health Care Program For Homeless, Low-Income and Underserved Women in Pine Hills (32808, 32818)

Program Outcomes

- Reduced rates of Maternal and Infant Morbidity and Mortality
- Reduced Low Birth Weight and Premature babies
- Reduced burden on emergency room and triage/walk-in health care
- Increased levels/visits of prenatal and postpartum care and well-women's GYN care – *currently servicing 3,600 health care visits/500 low-income, uninsured, underinsured and undocumented patients annually at Winter Garden site*
- Increased social support and referrals
- Increased patient and community-based health education

Expansion Plan

Placement of a Nurse Practitioner, mental health counselor, medical assistant/social support staff to immediately increase access for high-risk women to prenatal care and women's health services at a new 'Easy Access' Clinic site in Pine Hills will provide -

Target goals:

- An increase in clinical visits offered - approximately 60 prenatal visits and 20 women's health visits per week;
- An increase in in-house counseling and social support services – approximately 20 visits per week;
- An increase in collaborations and referral agreements with local practices, services and agencies
- **Total** 3000 health visits; 1000 social support visits per year

Evaluation of the health impact of increased access will begin 6 months after expansion.

**213 S. Dillard St. Suite 340
Winter Garden, Fl. 34787
407 656 6938**

Benefit – Pine Hills residents will have access to culturally competent women’s health care during pregnancy, postpartum and inter-conceptionally. The addition of a ‘**no-barrier to start your care**’ policy will enable the immediate triage and appropriate medical referrals, coupled with help in expediting applications for health insurance coverage. The improved compliance and consistent follow up from patients who develop trust and loyalty with the practice and staff will directly off-set the revenue losses for uncompensated care and allow us to expand service for uninsured/underinsured women with no current medical home. Provision of such access to care has resulted in vastly improved perinatal outcomes for Orange County mothers and babies over the past decade. (JJ Way® Study results 2007, 2014 *)

How we will measure the success of this project

Within the year:

- (1) A plan will be developed that addresses long-term financial viability.
- (2) Participation in the system of care will involve Winnie Palmer Hospital for delivery services and an increase of collaborating agencies will become evident
- (3) A pilot study will be implemented by January 2016.

Within five years:

- (1) There will be a statistically significant decrease in maternal and child health outcomes such as late entry to prenatal care, low birth weight and infant mortality in the targeted zip codes.
- (2) The hospitals, physicians and patients will report high levels of satisfaction.
- (3) The community partners will be seeking ways to expand The JJ Way® maternal child health model to meet other public health needs.

The JJ Way®: Reducing Perinatal Outcome Disparities in Orange County, Florida since 1998

***The JJ Way®: Reducing Perinatal Outcome Disparities: A Retrospective Matched Comparison Group Study on Birth Outcomes in At-Risk Populations**
Sarah J. Day, MSM, Wendy Gordon, LM, CPM, MPH, Tyan Parker Dominguez, Ph.D., MPH, MSW Mark Martzen, Ph.D., CIP, Jennie Joseph, LM, CPM

The JJ Way® group had no preterm births (0%) among Women of Color, whereas Women of Color in the standard care group had a preterm birth rate of 17.1% (p=0.01)
